# Security Assessment Report

---

| Field                           | Value                       |
|---------------------------------|-----------------------------|
| -----                           | -----                       |
| <b>**Target**</b>               | `unitru.edu.pe`             |
| <b>**Date**</b>                 | 2026-06-15                  |
| <b>**Engine**</b>               | OzyRecon v9.0.1 + OzyBounty |
| <b>**Scope**</b>                | unitru.edu.pe               |
| <b>**Assets Discovered**</b>    | 390                         |
| <b>**Endpoints Mapped**</b>     | 257                         |
| <b>**Hypotheses Generated**</b> | 257                         |

## Executive Summary

---

This report presents the findings of a security assessment conducted against `unitru.edu.pe`. A total of **\*\*390 assets\*\*** were identified, with **\*\*257 live endpoints\*\*** mapped. The assessment generated **\*\*257 security hypotheses\*\***, of which the highest-scoring items are detailed below.

### Key Metrics

| Metric                | Count |
|-----------------------|-------|
| -----                 | ----- |
| Subdomains Discovered | 390   |
| Live HTTP Endpoints   | 257   |
| Security Signals      | 257   |
| Testable Hypotheses   | 257   |
| Unique Technologies   | 110   |

## Technology Stack

| Technology                | Instances |
|---------------------------|-----------|
| -----                     | -----     |
| Apache HTTP Server        | 213       |
| PHP                       | 32        |
| MySQL                     | 24        |
| Bootstrap                 | 20        |
| Ubuntu                    | 10        |
| Apache HTTP Server:2.4.52 | 9         |
| Google Hosted Libraries   | 8         |
| Font Awesome              | 7         |
| HTTP/3                    | 6         |
| Joomla:1.5                | 6         |
| MooTools                  | 6         |
| Nginx:1.14.2              | 6         |
| HSTS                      | 5         |
| WordPress Block Editor    | 5         |
| Bootstrap:3.3.7           | 5         |

## Findings Summary

---

| Severity          | Count |
|-------------------|-------|
| -----             | ----- |
| <b>**MEDIUM**</b> | 257   |
| <b>**LOW**</b>    | 257   |

## Detailed Findings

---

---

### Finding #1: WordPress User Enumeration via REST API

| Field                  | Value                                              |
|------------------------|----------------------------------------------------|
| -----                  | -----                                              |
| <b>**Severity**</b>    | <b>**MEDIUM**</b>                                  |
| <b>**CVSS Vector**</b> | `CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:C/C:L/I:L/A:N/E:F` |
| <b>**CVSS Score**</b>  | 4.6/10                                             |
| <b>**Category**</b>    | Information Disclosure                             |

#### #### Description

**\*\*5\*\*** WordPress installations were found to expose user accounts via the REST API at `/wp-json/wp/v2/users`. This allows unauthenticated attackers to enumerate valid usernames for brute-force or phishing attacks. The user `adminoti` was identified across multiple independent installations, suggesting credential reuse.

#### #### Affected Assets

- `arquitectura.unitru.edu.pe`
- `matesc.unitru.edu.pe`
- `fastworkshopmathematics.unitru.edu.pe`
- `sisdef.unitru.edu.pe`
- `hfm.unitru.edu.pe`
- \*... and 2 more\*

#### #### Evidence

- **\*\*GET\*\*** `https://{site}/wp-json/wp/v2/users` → `200`

#### #### Remediation

- Disable the REST API users endpoint: add `remove\_action('rest\_api\_init', 'wp\_rest\_user\_controller');` to functions.php
- Install a security plugin (e.g., Wordfence, Sucuri) to block user enumeration

3. Implement unique credentials per WordPress installation

---

## Finding #2: Laravel Ignition Debug Panel Exposed

| Field                  | Value                                              |
|------------------------|----------------------------------------------------|
| -----                  | -----                                              |
| <b>**Severity**</b>    | <b>**MEDIUM**</b>                                  |
| <b>**CVSS Vector**</b> | `CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:C/C:H/I:H/A:H/E:P` |
| <b>**CVSS Score**</b>  | 5.2/10                                             |
| <b>**Category**</b>    | Security Misconfiguration                          |

#### #### Description

The Laravel Ignition debug panel was found accessible on at least one subdomain. The health-check endpoint (`/\_ignition/health-check`) confirms `can\_execute\_commands: true`. While the `execute-solution` endpoint is restricted to local IP, this represents a significant security risk if an attacker gains internal network access.

#### #### Affected Assets

- `api-uraa.unitru.edu.pe`
- `asistencia.unitru.edu.pe`

#### #### Evidence

- **\*\*GET\*\*** `https://api-uraa.unitru.edu.pe/\_ignition/health-check?format=json` → `200`
- Response: `{ "can\_execute\_commands": true }`
- **\*\*POST\*\*** `https://api-uraa.unitru.edu.pe/\_ignition/execute-solution` → `403`
- Response: `IP restricted`

#### #### Remediation

- Set `APP\_DEBUG=false` and `APP\_ENV=production` in `.env`
- Block `/\_ignition/\*` routes in web server config:

```
` ``apache
```

```
Require ip 127.0.0.1
```

```
` ``
```

3. Upgrade Ignition to the latest version ( $\geq 2.5.2$ )

### Finding #3: Outdated Software Versions Detected

| Field                  | Value                                              |
|------------------------|----------------------------------------------------|
| -----                  | -----                                              |
| <b>**Severity**</b>    | <b>**MEDIUM**</b>                                  |
| <b>**CVSS Vector**</b> | `CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:H/I:H/A:H/E:P` |
| <b>**CVSS Score**</b>  | 4.8/10                                             |
| <b>**Category**</b>    | Patch Management                                   |

#### #### Description

The following outdated software versions were detected: PHP 5.4.36 (2014), Apache 2.2.15 (2011), PHP 5.5.38 (2016), PHP 5.3.3 (2012). These versions are no longer supported and contain known vulnerabilities.

#### #### Affected Assets

- `www.sga2018.unitru.edu.pe`
- `www.aplicaciones.unitru.edu.pe`
- `sga2018.unitru.edu.pe`
- `aplicaciones.unitru.edu.pe`
- `picfedu.unitru.edu.pe`
- `... and 1 more`

#### #### Evidence

#### #### Remediation

Update all software to vendor-supported versions. Establish a regular patch management cycle.

---

### Finding #4: Exposed Administrative and API Endpoints

| Field           | Value                                              |
|-----------------|----------------------------------------------------|
| -----           | -----                                              |
| **Severity**    | **MEDIUM**                                         |
| **CVSS Vector** | `CVSS:3.1/AV:N/AC:L/PR:N/UI:N/S:U/C:L/I:N/A:N/E:P` |
| **CVSS Score**  | 4.1/10                                             |
| **Category**    | Exposed Surface                                    |

#### #### Description

Multiple administrative panels and API endpoints were found accessible without authentication. Notable examples include the GLPI IT management system, API endpoint structure disclosure, and various intranet portals.

#### #### Affected Assets

- `cepejup.unitru.edu.pe` (GLPI)`
- `api-uraa.unitru.edu.pe` (API)`
- `intranet.unitru.edu.pe` (Intranet)`
- `diplomas.unitru.edu.pe` (Grados y Titulos)`

#### Evidence

#### Remediation

- Restrict administrative interfaces to VPN/internal networks
  - Implement authentication gateway for all API endpoints
3. Deploy WAF to protect exposed services

## Recommendations

---

| Priority    | Action                                                                 |
|-------------|------------------------------------------------------------------------|
| -----       | -----                                                                  |
| Immediate   | Disable WP REST API user enumeration on all identified WordPress sites |
| Immediate   | Restrict Ignition debug panel access to internal IPs only              |
| Immediate   | Change shared administrative credentials across all CMS platforms      |
| Short-term  | Implement rate limiting on all exposed API endpoints                   |
| Short-term  | Move GLPI and management consoles behind VPN                           |
| Medium-term | Establish a patch management process for CMS platforms                 |
| Medium-term | Implement WAF with OWASP CRS ruleset                                   |

## Methodology

---

This assessment was conducted using a multi-phase reconnaissance and analysis pipeline:

| Phase                | Activity                                     | Tools                  |
|----------------------|----------------------------------------------|------------------------|
| -----                | -----                                        | -----                  |
| 1. Passive Recon     | Subdomain enumeration via public sources     | Subfinder, Assetfinder |
| 2. Active Recon      | DNS resolution, HTTP probing                 | DNSx, HTTPx            |
| 3. Fingerprinting    | Technology detection, version identification | HTTPx, Wappalyzer      |
| 4. Service Analysis  | Port scanning, service version detection     | Naabu, Nmap            |
| 5. Intelligence      | Pattern analysis, hypothesis generation      | OzyRecon Engine        |
| 6. Expert Validation | Manual verification of high-value findings   | Analyst                |

## Appendix: Complete Asset Inventory
